

Ladies and gentlemen,

Welcome to the "Introduction to Coding" workshop. I'm thrilled to see so many eager learners here today, ready to dive into the world of coding. Whether you're here out of curiosity or because you're looking to start a new career, you've made a fantastic choice to begin your coding journey. Coding is the language of the future. It allows us to build amazing apps, create stunning websites, and solve complex problems. Today, we're going to demystify some of the basics and give you the tools you need to start thinking like a programmer.

We'll begin by understanding what code is and how it functions as a set of instructions for computers. We'll explore some of the most popular programming languages such as Python and JavaScript--languages that are perfect for beginners due to their readability and versatility.

Throughout the day, we'll engage in hands-on exercises designed to reinforce what you learn. By the end of this workshop, you'll have written your first lines of code and hopefully developed a passion for this exciting field.

Remember, coding is about problem-solving, creativity, and perseverance. Don't be afraid to make mistakes, as they are essential steps in the learning process.

Thank you for joining us today, and let's get started on this exciting adventure into coding!

Happy coding!
