

Thank you for inviting me today. When I faced a challenge in my previous role, my approach was to break the problem down into smaller, manageable parts. For instance, we once encountered a significant drop in efficiency on a project. I started by gathering data to understand the root cause. I organized a meeting with the team to brainstorm solutions and encouraged open communication. By implementing a few targeted changes, we were able to increase efficiency by 30% within a month. This experience taught me the importance of collaboration and data-driven decisions in problem-solving.
