

Ladies and gentlemen,

Thank you for being here today. I'm excited to share my project on the importance of recycling. Every day, we generate waste that could be recycled instead of ending up in landfills. By committing to recycling, we not only conserve natural resources but also help reduce pollution. Consider this: recycling one ton of paper saves 17 trees and 7,000 gallons of water. Imagine the impact if each of us contributes. Moreover, many products can be made from recycled materials, supporting sustainable industries and creating jobs.

I believe that together, we can make a substantial difference. Join me in promoting recycling in our community to build a cleaner and healthier environment for future generations.

Thank you.
