

Ladies and gentlemen, future innovators and engineers,
Welcome to this exciting new chapter of your academic journey. Today marks the beginning of your orientation, a crucial step as you transition from classroom theories to real-world applications in the industry. As you embark on this path, I want you to envision yourselves not just as engineers, but as pioneers of innovation. Our world is in constant need of fresh ideas, sustainable solutions, and transformative technologies. You have the potential to create the next breakthrough that could change how we live, work, and interact with our planet. Remember, every great innovation starts with a question. So be curious, challenge the norms, and don't be afraid to think differently. In this orientation, you will learn not only the skills necessary for your field but also how those skills can be applied to create innovative solutions. You will engage with industry leaders, who were once in your shoes, and see first-hand the impact of engineering and technology on society. We are here to support you every step of the way. Take this opportunity to ask questions, build networks, and collaborate with your peers. The connections you make here will be invaluable in your professional life. Innovation is the heart of engineering, and you are the heartbeat. Embrace your journey ahead with enthusiasm and determination. The future is yours to shape. Thank you, and welcome to the forefront of engineering innovation. Let's make an impact together!
