

Certainly! Here's a simple example of a speech for a technology workshop with a hands-on learning approach:

---

"Hello everyone, and welcome to our hands-on technology workshop! I'm so excited to have each of you here today as we dive into the exciting world of technology.

Before we get started, I want to emphasize that this workshop is all about learning by doing. We'll be exploring various tools and technologies together, step by step. Feel free to ask questions at any time; we're here to learn from each other.

First on our agenda is a quick introduction to our workstations and the tools we'll be using today. Please go ahead and turn on your devices.

You'll see an interface that's both user-friendly and powerful.

Now, I'd like everyone to open the software we'll be working with. Notice the icons and menus. Take a moment to click around and familiarize yourself with the layout. If at any point you're unsure, just raise your hand and I'll be right there to assist.

Once you're comfortable, we're going to jump into our first exercise.

You'll be creating a simple project, so together, we can get a feel of the process from start to finish. Remember, the goal here is to explore and experiment.

As you work through these tasks, think about how these tools can apply to your personal or professional projects. How might they improve efficiency or spark creativity?

Let's take this opportunity to learn, experiment, and most importantly, enjoy the process. I'm here to support you every step of the way. So, let's get started and have some fun with technology today!"

---

Feel free to adjust this example to better fit the specific technology or goals of your workshop.
