Good morning, class! Today, we're going to learn about fractions. A fraction represents a part of a whole. It has two parts: the numerator and the denominator. Let's say we have a pizza that's divided into 8 equal slices. If you eat 3 slices, we can express that as the fraction 3/8. Here, 3 is the numerator, showing the number of slices eaten, and 8 is the denominator, showing the total number of slices. Remember, the numerator is the top number and the denominator is the bottom number. Fractions can be added if the denominators are the same. For example, if you have 2/8 of a pizza and your friend has 3/8, together, you both have 2/8 + 3/8 = 5/8 of the pizza. That's it for today! Practice this at home by using your food or any items you can divide. Thank you!
