

Sure, here's a simple example of a clarification speech for a group meeting in a problem-solving tone:

---

"Good morning, everyone.

Before we proceed with our agenda, I wanted to ensure we're all on the same page regarding the issue we're addressing today. The primary concern we're facing is the recent drop in our customer satisfaction scores over the past quarter. It seems that delivery delays have been a significant factor contributing to this issue.

To tackle this effectively, we need to first understand the root causes of these delays. Are they due to supply chain disruptions, internal processing bottlenecks, or perhaps a combination of both? I believe it's crucial we clarify this so our solutions are both targeted and effective. If anyone has data or insights regarding this, please share them as it will help us form a complete picture of the situation. From there, we can brainstorm possible solutions and develop a plan to improve our processes.

Thank you for your cooperation. Now, let's hear your thoughts."

---

This speech sets the stage for collaborative problem-solving by clearly defining the issue and inviting contributions.
